

tesseract\_scene\_graph  
::StateSolver

```
graph BT; KDL[tesseract_scene_graph::KDLStateSolver] --> Base[tesseract_scene_graph::StateSolver];
```

The diagram illustrates an inheritance relationship between two classes. At the bottom is a gray box representing the base class, `tesseract_scene_graph::KDLStateSolver`. A blue arrow points upwards from this box to a white box at the top, which represents the derived class, `tesseract_scene_graph::StateSolver`. This indicates that `KDLStateSolver` inherits from `StateSolver`.
